

RUNE et al
Serial No. 09/543,536

While Applicants do not see how the distinctions could have been missed in the March 19 arguments, Applicants welcome another opportunity to emphasize the distinctions, and will now do so briefly.

Applicants' independent claims all (claims 1, 12, 18) specify a signaling, from one radio network controller to another, of information for linking a transport channel utilized for the service with a radio access bearer (RAB) for the service. In the March 19 response, this feature was mentioned several times in the Brief Comments Section B (e.g., twice on page 12, even italicized in the last paragraph); in New Claims Section C (see the first sentence of section C on page 14); and in the Patentability Section D (see the last sentence in the first paragraph on page 17, the sentence bridging pages 17 and 18 wherein the word "transport" is twice underlined; and, the last paragraph of section D appearing on page 18).

US Patent 6,466,556 to Boudreaux concerns a problem related to handling real-time data streams during SRNC Relocation. Applicants' claimed invention, on the other hand, ensures that the service (which can be one of many services active at the same time) is mapped onto transport channels and thereby onto the physical channel/channels of the radio interface by the target RNC in the same way as it was by the old SRNC. US Patent 6,466,556 to Boudreaux handles duplication of uplink packets for a certain RAB; it does not even remotely relate to creating a linking or mapping between the transport channel and the radio access bearer (RAB) carrying the service. As such, US Patent 6,466,556 to Boudreaux misses entirely the claimed invention and provides no basis for denying patentability of any pending claims.

If the foregoing is not clear, it is suggested that the Examiner again consider the lengthy explanatory comments in the March 19 amendment, which not only summarized Applicants' disclosure, but also provided further comments regarding US Patent 6,466,556 to Boudreaux and its insufficiency.

It is therefore respectfully requested that the final rejection be withdrawn, and all claims allowed. The application should therefore be passed to issue.

The Commissioner is authorized to charge the undersigned's deposit account #14-1140 in whatever amount is necessary for entry of these papers and the continued pendency of the captioned application, including but not limited to additional claims fee and the extension of time fee.

Should the Examiner feel that an interview with the undersigned would facilitate allowance of this application, the Examiner is encouraged to contact the undersigned.

Respectfully submitted,

NIXON & VANDERHYE P.C.
